

Technology Risk Overview

With over 80% of business information held in electronic format and an exponential corporate reliance on technology and the Internet, it is no longer possible to consider the risk to business continuity in a traditional way.

Protecting the perimeter is not sufficient to defend against threats that are just as likely to come from within the organisation. The implementation of effective data management policies coupled with an incident response capability that will not only have investigative rigour but will keep the business running is now essential.

Technology Risk Limited offers a set of complimentary technology based risk consultancy products and services, advising corporate clients seeking to prevent, detect and resolve technology related business issues.

While many consulting firms offer a 'one size fits all' solution, TRL strives to identify the individual client's actual needs and then uses its established methodologies to tailor a bespoke solution.

OUR SERVICES

Information Security - We use a fully-tested, customised approach to provide clients with practical solutions by physical testing, vulnerability and risk assessments, regulatory compliance assessments, incident response planning, business continuity, IT disaster recovery planning, security policy development, security awareness and training and security solution implementation management.

Hi-Tech and Business Investigation - TRL harness their experience in both traditional and digital investigation methods to offer a holistic approach to the investigation of fraud and theft, corruption and extortion, money laundering and asset tracing, intellectual property theft, harassment and employee related issues, Internet related security breaches and other business related issues.

Data Management - Our service pulls together a large number of qualified parties covering for example computer forensics, information security and data management to create a single, cohesive data management system, utilising the latest software and systems.

Gap Reviews - Integral to these service offerings are a series of gap review products, which provide the client with a current state assessment. This independent third-party verification is an ideal tool to reassure Board members that technology risks have been thoroughly reviewed against emerging threats.

Technology Solutions - Technology is, of course, vital to the success of TRL. It is imperative that clients stay up-to-date with the latest technological developments. TRL has partnered with cutting edge providers of hardware and software solutions that compliment their own services and bring you the very latest in IT risk mitigation.

Training - TRL has the benefit of a team that led the development of innovative training programmes that raised the knowledge and skill of the police and law enforcement agencies in the fight against hi tech crime across the EU and beyond. That team is now able to bring the skills to corporate teams to enable them to meet the National Occupational Standards for Countering E-Crime and may lead to a NVQ/SVQ qualification. (See www.skillsforjustice.co.uk) TRL also offer a range of other traditional skills training to provide the rounded investigator and investigations manager.
